

SafeStore Backup Manager

– a VAST Service Offering

Increase Backup and Restore Success

The best way to increase the success of your backup environment is to eliminate the cause of failed backups. SafeStore StorageConsole Backup Manager helps you pinpoint problems to increase the reliability of your backups and restores.

Backup and Restore Summary

Instantly see successful, partial, and failed back-ups. Drill down to discover the root cause of reported problems.

Discovery of Unprotected Data

Reduce exposure of unprotected data by auto-matically identifying clients and data sets that aren't protected under a backup policy.

Identify Suspect Backups

Eliminate “false positives” by identifying partial or failed backups that report as successful by the backup software.

Improve Capacity Planning

SafeStore StorageConsole Backup Manager helps you maximize current backup resources and improve your capacity planning.

Drive Utilization

The Tape Library and Drive Utilization Report helps load balance your drives by identifying drives that are underutilized and those that are over capacity.

Media Forecasting Dashboard

SafeStore StorageConsole Backup Manager shows the capacity you'll need in the future based on your current and historical tape consumption. Plan tape purchases accordingly instead of being caught off guard when capacity runs out.

Tape Media and Disk Utilization

Gain an intuitive view of available tape media capacity and utilization with indicator bars. Availability warnings enable you to manage the backup environment proactively.

Policy Auditing

Keep an audit trail and history of changes made to NetBackup policies including detailed compliance reporting of the changes and the effect on the data protection of the associated clients over the life of the Policy.

Streamline Compliance

SafeStore StorageConsole Backup Manager provides out-of-the-box compliance reports so you'll meet internal SLAs and pass external regulatory audits like Sarbanes Oxley. You can also easily create custom reports that match unique compliance requirements.

Mission Control Dashboard

Preconfigured dashboard designed for compliance reporting gives you a snapshot status of every server by day using intuitive indicator lights.

Service Level Agreements (SLA)

Track backup performance against established SLA levels for backup start time, duration, and backup success.
