

Archive360 Connect™ for Microsoft SharePoint Online

Reduce SharePoint storage and legacy file share costs.

Storage consumption is a top challenge for SharePoint Online customers. You have a limited amount of SharePoint Online storage that comes with your Microsoft 365 license. You have legacy file shares to maintain. If not managed, growing usage of storage-intensive applications, such as Microsoft Teams multiple file storage locations, and end user reticence to delete their files, lead to increasing storage costs, search performance issues, and poor productivity due to difficulties finding files.

Archive360 Connect™ for Microsoft SharePoint Online helps you take advantage of archiving to the Azure cloud instead of purchasing costly additional storage. This significantly reduces storage costs, with zero impact to your end users, while streamlining storage management so you and SharePoint users can be more productive. A win-win for you and your organization.

Extend Your SharePoint Storage

- Automatically manage your SharePoint Online storage limit by extending your SharePoint storage to the more affordable Azure Cloud.
- Decommission legacy file shares, migrate their files to our solution and cost-effectively manage them in SharePoint Online.
- Minimal impact to users:
 - Users continue to have seamless access to their archived files directly from the file's original SharePoint location via a record link.
 - Legacy file share users navigate to their files in SharePoint the same way they navigated to them in the legacy file share.
 - The file name is the same. The only difference is the link now points to the file in the archive.
 - SharePoint search can continue to be used to find content in SharePoint AND the archive.
- Manage file archival for inactive user accounts.
- Manage SharePoint Online and Azure storage within SharePoint Online.
- Already have an Azure tenant? Use your Microsoft Azure Consumption Commitment to purchase.

Control Storage Costs

- Stop the expensive cycle of purchasing additional high-cost SharePoint Online storage.
- Automatically archive inactive files from SharePoint Online to Azure based on policy criteria you define (e.g. - date last accessed, file size larger than, etc.).

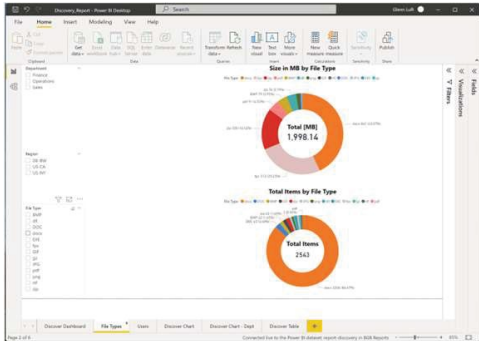

The benefits of Archive360 Connect™ for SharePoint Online

- Reduce additional SharePoint storage costs by as much as 70%
- Extend SharePoint storage into Azure Cloud
- Automatically move inactive or less referenced files to low-cost storage in Azure
- Retire legacy file shares and their costs and manage their files in SharePoint without impacting your SharePoint storage limit
- Easily find files archived from legacy file shares in SharePoint
- Search and retrieve archived files directly from within SharePoint Online
- Store information in its native format
- Improve productivity by relieving users and IT from the file management burden
- Analyze, identify, and report on SharePoint Online storage consumption

Analyze SharePoint Usage

- Analyze content across multiple data points including existing SharePoint site storage statistics by site, file type, usage dates, author, projected growth rate and Azure cost savings with detailed, interactive reports.

Interactive SharePoint Online Insights Reports

Effortless Storage & Retrieval

Automate SharePoint File Archival

- Administrators can automate the collection and archival of files by site, custodian, file size, and file age based on modification, access or creation date.

Seamless Accessibility

- Give users seamless access to their archived files in their native format directly from within SharePoint with record links and SharePoint search.
- Quickly preview archived files prior to download.
- Users can edit a file's retention period and access permissions within SharePoint.

Highly Extensible Platform

- Leverage Open API to add functionality or upgrade to Archive2Azure for eDiscovery case management, cross-system visibility and unified information governance.

About VAST

VAST provides IT services and cloud management solutions to companies and organizations across the United States. VAST services help businesses reduce cost and simplify the management of their evolving on-premise, hybrid and multi-cloud environments. VAST partners with Archive360 to deploy, support, and provide managed services for its complete portfolio of information management and archiving solutions. Visit us at www.vastITservices.com or call **800.432.VAST**.

Take Control of Your SharePoint Data

- Migrate files from legacy file shares to our archive and push **links** to the files (minimal SharePoint storage consumption) or the files to SharePoint Online.
- Automatically archive inactive user files to less costly Azure storage, optimizing M365 license allocation and costs.
- Restore files from the archive to SharePoint Online individually or as a batch with metadata, compound document links, retention schedule and permissions fully intact.
- All SharePoint Online files can be appropriately archived to meet in-country data residency requirements.
- All activities performed on archived content are tracked and logged in an immutable audit trail.

Protect Your Data

- Recover data, including version changes, seamlessly in the event of accidental deletion or another incident.
- Protect data from tampering or accidental deletion with immutable SEC/FINRA compliant WORM storage.
- Role- and attribute-based access control ensure users can only view files they are entitled to access.
- Encrypt data in transit and at rest using rotating keys.
- Role- and attribute-based access control ensure users can only view files they are entitled to access.
- Unlike SaaS-based solutions, retain total control of infrastructure security protocols (e.g. – firewall rules, IP whitelist, etc.) and your data, in your private cloud, in its native format, so it can be easily restored and, if you don't want to keep your data in our archive, it won't be held hostage.
