

Veritas Enterprise Vault.Cloud

SOFTWARE AS A SERVICE ARCHIVING AND eDISCOVERY

Veritas™ Enterprise Vault.cloud is a cloud-based archiving service that helps organizations more effectively meet data governance requirements and more efficiently execute business or legal eDiscovery. Thousands of customers have used Enterprise Vault.cloud to ensure a successful and compliant migration to a cloud based application platform such as Office 365 or Google G Suite Enterprise.

Simplify Retention Management

Enterprise Vault.cloud interfaces seamlessly with Office 365, Google G-Suite Enterprise, as well as on-premises mail systems such as Exchange to ensure information is properly retained. A default retention policy can be applied to all archived information, or role-based rules can apply to specific individuals, so that customized retention periods can be assigned. Even email for departed employees covered by your retention policies is retained - at no extra charge. Options are also available to capture unified communications that include instant messaging and social media, Microsoft Sharepoint documents, and more.

Streamline Compliance and Ensure Defensible eDiscovery Results

Enterprise Vault.cloud leverages the native journaling capabilities of enterprise email systems to capture emails, attachments, and all message metadata, then timestamps, serializes, and gives it a unique signature to ensure its authenticity. The Journaling process ensures full content and recipient capture, so you always know who received what, and when.

Enterprise Vault.cloud enables Legal Hold to be applied broadly across keyword searches and users - or to target specific legal custodians - without putting mass restrictions on large groups or domains of users that might hinder routine mailbox data management. With a legal hold in place, even if an end user deletes or modifies a message in their Inbox or Personal Folders, the original copy remains in the journaled archive.

Enterprise Vault.cloud search and eDiscovery capabilities provide workflows to quickly scan massive amounts of data, iteratively filter out non-relevant results, then collect and organize the results by cases or legal matters. Millions of records can be searched and collated in a matter of seconds. When collection is complete the results can be made available on-line to outside legal partners. During review, role-based access controls ensure that data is properly handled so that a secure evidentiary chain of custody is always automatically maintained.

- Ensures retention practices for regulated organizations comply with applicable laws and eDiscovery practices are defensible
- Preserves email and other unstructured data by policy, as journaled records in a high-availability repository, protected against unauthorized or accidental deletion
- Provides rapid search, legal hold, case management and eDiscovery workflow to reduce cost, and improve productivity of both IT and litigation support staff
- Licensed for a predictable monthly fee, stabilizing archiving costs, regardless of data growth

A Compliance-Ready, Best Practice Platform

Enterprise Vault.cloud enhances your Office 365, Google Enterprise email, and overall day governance by providing unique Best Practice compliance, and eDiscovery benefits:

- **Standardizes retention management compliance:**

Automates and provides proof of, policy-driven retention processes.

- **Improves both IT and end-user eDiscovery productivity:**

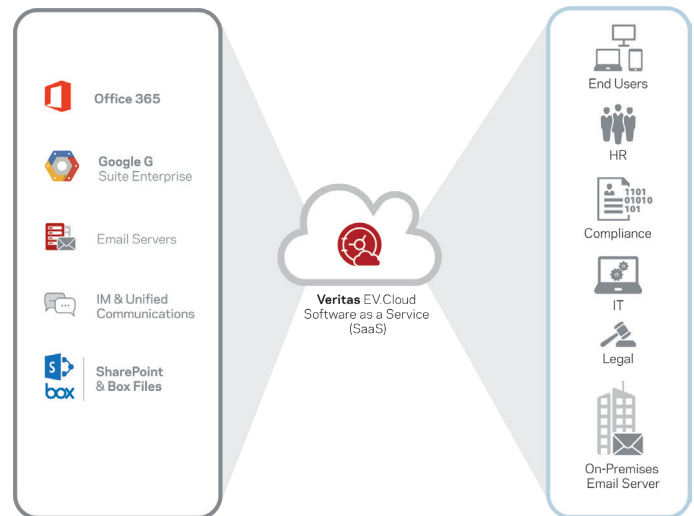

Powerful tools make IT and end users more efficient, helping personnel to work smarter, and put in less of their expensive time per project.

- **Satisfy strict legal requirements:** Immutably journals all records and ensures a secure chain of custody for handling evidentiary data.

- **Improves Investigation Workflow:** Grants role-based online access, enabling segregated work, allowing some staff to search and collect and others to review.

- **Streamlines email migration:** Simplifies moving to cloud-based email from a traditional email system by archiving your legacy data first— whether it is stored on tape, PSTs/NSFs, or trapped within existing on-premises servers.

- **Integration with the Veritas™ eDiscovery Platform:** Tight coupling with value-add solution allows customers to introduce a more powerful analysis and review platform if needed.

VAST can help your organization migrate to Veritas' EV.Cloud SaaS service.

Services and assistance that VAST provides include:

- Migration assistance from Exchange and/or on-premise Enterprise Vault.
- Implementing configuration changes within your messaging environment, such as transport rules and send connectors.
- Work with your organization's legal and records retention teams to develop retention tags and retention standards.
- Work with your organization's legal team to incorporate EV.Cloud into their litigation readiness workflow and matter management tools, such as the Veritas eDiscovery Platform, Powered by Clearwell.
- Work with your organization's supervisory compliance teams to implement departmental sampling for FINRA/SEC broker dealer communication supervision.

VAST: Service and Solutions for On-Premise, Hybrid and Multi-Cloud Environments
