

Bringing Google-like Simplicity Data Management

Most enterprise data is scattered across multiple locations on-premises and in public clouds, trapped in infrastructure silos, and buried unseen in long forgotten storage systems, making it almost impossible for IT to control – still less exploit for business advantage.

Cohesity eliminates this mass data fragmentation problem with a web-scale, data management platform that radically simplifies the way companies protect, control and extract value from their data. This software-defined platform spans across clouds and data centers, can be managed from a single GUI, and enables independent apps to run in the same environment.

SOLUTION: Web-scale software-defined data management platform

BENEFITS: Simplify operations and infrastructure, reduce TCO by 70% or more, easy cloud integration, Google-like search

Data Management Redefined

The key to the Cohesity approach is the ability to collapse workload silos, eliminate copies and share data efficiently. We start with backups, which are usually treated as expensive insurance that sits idle. Instead Cohesity enables IT to do more with their data, such as detect ransomware attacks, search for potential compliance violations, and run analytics to extract unique insights by running apps on the same platform.

- **Cohesity DataPlatform™** – The only solution built on a hyperconverged, scale-out design that converges backup, files, dev/test and analytics, and uniquely allows applications to run on the same platform to extract insights from data. Designed with Google-like principles, it delivers true global deduplication and impressive storage efficiency that spans edge to core to the public cloud.
- **Cohesity DataProtect™** – Modern backup and recovery software fully integrated with the Cohesity DataPlatform, providing simple policy-based backup, archiving to public cloud, recovery point objectives (RPOs) within minutes and instant mass restore while lowering TCO by 70% or more.
- **Cohesity Helios™** – A unique SaaS-based application that works in concert with Cohesity DataPlatform to provide a single view and global management of all your data and workloads wherever they reside - on-premises, public cloud, and edge. Much more than a passive dashboard, Cohesity Helios utilizes cutting edge machine learning algorithms to proactively assess IT needs and automate infrastructure resources.

At A Glance

Founded: 2013

Founder & CEO: Mohit Aron

HQ: San Jose, California

Key funding partners:

Sequoia Capital, Cisco Investments, HPE, Google Ventures, SoftBank and Morgan Stanley

Representative Directors & Advisors:

- Dan Warmenhoven, former NetApp CEO
- Bill Coughran, Sequoia Capital
- Carl Eschenbach, former VMware President & COO, Sequoia Capital
- Jonathan Chadwick, former VMware CFO
- Rob Salvagno, Cisco
- Paul Glaser, HPE

Industry accolades: 25+ awards
